ArDescription: Sequence of the C. elegans cosmid C29E4.
A; Reference number: S44738
A; Accession: S44765
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-181 < WIL>
A; Cross-references: EMBL:L23651; NID:9388575; PID:9388576
C; Genetics: 46/3; 126/2; 150/3; 163/1
C; Superfamily: Caenorhabditis elegans C29E4.9 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 100.0%; Score 34; DB 2; I

Amendate-early R1.5 circ protein - bovine herpesvirus 1 (strain K22)
N.Alternate names: V2V and EHV-1 homolog
C.Species: bovine herpesvirus 1
C.Sapecies: Authority 10 V. Vogt, B.; Schwyzer, M.
J. Virol. 67, 1328-1333, 1993
A;Title: Immediate-early transcription over covalently joined genome ends of bovine here and a 445707
A;Reference number: A45707
A;Reference number: A45707
A;Residues: 1-247 <FRAS
A;Residues: 1-247 <FRAS
A;Residues: 1-247 <FRAS
A;Note: sequence extracted from NCBI backbone (NCBIN:125354, NCBHF:125357)
A;Note: sequence referred to as infectious bovine rhinotracheitis virus
                                                                                                                                                                                                                                                                                                                   hypothetical protein F2K15.160 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 04-Feb-2000 #sequence_revision 04-Feb-2000 #text_change 18-Feb-2000
C;Accession: T45835
R;Rieger, M.; Gabel, C.; Mueller-Auer, S.; Schaefer, M.; Zipp, M.; Mewes, H.W.; Lemck
Submitted to the Protein Sequence Database, January 2000
A;Reference number: Z23015
A;Accession: T45835
A;Accession: T45835
A;Status: preliminary
A;Molecule type: DNA

hypothetical protein F8F16.190 - Arabidopsis thaliana Cispecies: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Accession: T099 #sequence_revision 30-Apr-1999 #text_change 30-Apr-1999
C;Accession: T0404, P.; Dose, S.; Jarke, D.; Scharfe, M.; Schon, O.; Hoheisel, J.; M submitted to the Protein Sequence Database, April 1998
A;Recession: T0404
A;Accession: T0404
A;Accession: T0404
A;Residues: 1-278 <BEV>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Experimental source: cultivar Columbia

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

- FUNCTION: ADHESION PLAQUE PROTEIN. BINDS ALPHA-ACTININ AND THE CRP PROTEIN. MAY BE A COMPONENT OF A SIGNAL TRANSDUCTION PATHWAY THAT MEDIATES ADHESION-STIMULATED CHANGES IN GENE EXPRESSION.
- SUBCELLULAR LOCATION: CYTOPLASMIC; ASSOCIATES WITH THE ACTIN CYTOSKELETON NEAR THE ADHESION PLAQUES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gallus gallus (Chicken).

"CDNA cloning and characterization of sciellin, a LIM domain protein
"CDNA cloning and characterization of sciellin, a LIM domain protein
"L. Biol. Chem. 273:31347-31554 (1998).
"I Biol. Chem. 273:31347-31554 (1998).
"I FUNCTION: May function in the assembly or regulation of proteins
in the cornified envelope. The LIM domain may be involved in
homotypic or heterotypic associations and may function to localize
sciellin to the cornified envelope.
"SUBCELLULAR LOCATION: Cytoplasmic. May become cross-linked to
membrane proteins by transglutaminase.
"ISSUE SPECIFICITY: Highly expressed in esophagus. It is also
expressed in Keratinocytes, amniocit tissue, foreskin stratum
spinosum and stratum granulosum, hair follicle and nail.
"SIMILARITY: CONTAINS 1 LIM DOMAIN. THE LIM DOMAIN BINDS 2 ZINC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modulating cytoskeletal rearrangement to regulate T cell and macrophage activation for treating cancer, autoimmune disease, and infectious disease, comprises contacting with a Fyb/SLAP complex modulator
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This peptide motif is found in zyxin, vinculin and other focal adhesion proteins containing an ActA-like motif. The N-terminal protein of novel murine Mena (mammalian Ena) protein (see AAW37148) contains an Ena-VASP homology domain (FFH1) that directs the proper localisation of Mena to focal contacts via directed protein-protein interactions with zyxin, vinculin etc. This suggests that the FPPPP motif may comprise the core recognition site in EVH1 ligands. Based on the disclosed Mena and Ev1 genes (see AAW37148-53), a variety of methods and compositions are provided for screening, isolating and characterising endogenous and exogenous factors, drugs and therapeutic agents useful to evaluate and/or control cytoskeletal dynamic events involved in normal and abhorant cell morphology, adhesion, motility, growth and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Fyb/SLAP protein; EVH1 domain; cytoskeletal rearrangement; enabled/vasodilator-stimulated phosphoprotein protein; T cell; T cell receptor; Enal/VASP protein; lymphocyte; macrophage; platelet; infectious disease; cancer; autoimmune disease; inflammation; platelet aggregation; wound healing; clotting.

```
Internation describes a method for modulating cytoskeletal
rearrangement in a cell, or T cell response to T cell receptor
stimulation. The method comprises contacting the cell or T cell with
a Fyb/StAP complex modulator sufficient to modulate the formation
of a complex of an Ena/VASP protein and a Fyb/StAP protein. The
method is useful for modulating cytoskeletal rearrangement in a cell
such as a lymphocyte, preferably a T cell, a macrophage or a cell
fragment such as a platelet and for modulating T cell response to a
real receptor stimulation. T cell response is increased in a subject
having or at risk of developing infectious disease or cancer and T cell
response is inhibited in a subject having or is at risk of developing an
autoimmune disease or a condition characterized by infiammation. A
composition comprising a Fyb/SLAP complex inhibitor is useful for
increasing platelet aggregation for promoting wound healing or
The present sequence represents a Fyb/SLAP complex inhibitor. Fyb/SLAP proteins are ligands for the EVH1 domains of Eng(enabled)/vasodilator-stimulated phosphoprotein (VASP) proteins. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cell migration; Ena/VASP; wound healing; actin polymerisation; neurodegeneration; Alzheimer's disease; Down Syndrome; trauma; stroke; Parkinson's disease; amyotrophic lateral sclerosis; ALS; epilepsy; Huntington's disease; ALS-Parkinsonism-dementia complex; bulbar palsy; Tourettes syndrome; hypodyjvozemia; hypoxia; Creutzfeldt-Jakob disease; Korsakoff's syndrome; learning; memory; brain damage; senile dementia; inflammatory disorder; arthritis; allergy; gout; organ transplant;

The invention relates to a method of preventing mammalian cell migration, comprising inducing a functional Ena(enabled)/vasodilator-stimulated phosphoprotenin (WASP) or promoting cell migration comprising depleting functional Ena/WASP protein in the mammalian cell. The method is useful for preventing or promoting mammalian cell migration, preferably tumour cell migration in vitro or in vivo and to prevent tumour cell metastasis in a subject. An Ena/WASP activator or inhibitor is useful for promoting wound healing, preferably fibroblasts or nerve cells of a tissue type with the inhibitor to promote actin polymerisation and tissue formation or a scaffold The inhibitor is also useful for preventing complex, progressive amyotrophic lateral sclerosis (ALS), stroke, direct trauma, Huntington's disease, epilepsy, ALS-Parkinsonism-dementia complex, progressive supranuclear palsy, progressive bulbar palsy, springerial amyolodosis, pick's atrophy. Retts complex, progressive and korsakoff's syndrome. The Ena/Wasp cretifieldt-Jakob disease and korsakoff's syndrome. The Ena/Wasp cretifieldt-Jakob disease and korsakoff's syndrome. The Ena/Wasp cretifieldt-Jakob disease and korsakoff's syndrome. The Ena/Wasp contining a subject having or at risk of developing a learning disorder such as tisk of developing a learning disorder such as subject having or at risk of developing a learning disorder such as such as administered in an amount for inhibiting the activity of Mena in a synapse. Ena/Wasp activator is administered in an amount for inhibiting the activity of man enamount configuration of infarmer and the activator is administered in an amount configuration of mematopolatic cells reduces the ability of the cells to migrate and this is useful for treating and preventing inflammatory disorders such as arthritis, allergy, gout, organ transplant, colliss and ischemic alseases and also for treating contered or parawas and also described the colliss and ischemic respect the enamonal and a prevention or the activity of the activity 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Activating sequence; Gal4; transcriptional activator; RNA polymerase;

AAW31412-W31459, AAW31461-W31481, AAW31483-W31493 and AAW39053-W39076

are fragments used in an assay to determine novel transcriptional
activators. The method involves the production of transcriptional
activators comprising of a DNA-binding group and a 6-25 amino acid
peptide that is covalently bonded to the DNA binding group and does not
represent a fragment of a natural transcription acitvator.
Protein-protein interactions are identified in the assay by fusing a
DNA-binding domain to a library of DNA fragments and introducing this and
a fusion of target protein and a polypeptide containing a region of Gal4
which interacts with GallIP into a cell containing GallIP and identifying
members of the library that interact with the target from activation of
transcription. Such constructs are used to activate transcription in a
cell, e.g. for controlling gene activity, particularly in gene therapy
(e.g. recognizing a site close to a selected therapeutic gene).
Transcription can be activated without blocking other transcriptional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cell migration; Ena/VASP; wound healing; actin polymerisation: neurodegeneration; Alzhelmer's disease; Down Syndrome; traumas stroke; Parkinson's disease; amyotrophic lateral sclerosis; ALS: epilepsy; Huntington's disease; ALS-Parkinsonism-dementia complex; bulbar palsy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         activators. They probably act by interacting with a component of the polymerase II holoenzyme, Galli, the strongest known yeast activator, which provides a more sensitive assay allowing detection of even weak protein-protein interactions. Such activators do not create toxicity problems even when overexpressed.
                                                                                                                                          New transcriptional activator containing DNA binding domain bound to peptide - useful for controlling gene expression, especially in gene therapy, and in protein-protein interaction assays, does not inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Enabled protein; Ena; vasodilator stimulated phosphoprotein; VASP;

neurodegeneration such as in Alzheimer's disease, Down Syndrome,
Parkinson's disease, amyotrophic lateral sclerosis (ALS), stroke, direct
Crauma, Huntington's disease, epilepsy, ALS-Parkinsonism-dementia
Complex, progressive supranuclear palsy, progressive bulbar palsy,
spinomuscular atrophy, cerebral amyloidosis, pick's atrophy. Retts
Creutzfeldt'Jakob disease and Korsakoff's syndrome. The Ena/VASP
inhibitor is further useful for enhancing learning and memory in a
subject having or at risk of developing a learning disorder such as
Alzheimer's disease, Creutzfeldt-Jakob disease, brain damage, senile
dementia, Korsakow's disorder and age-related memory loss. The inhibitor
is administered in an amount for inhibiting the activity of Mena in a
synapse. Ena/VASP activator is useful for disrupting learning and memory
and the activator is administered in an amount to promote Bna/VASP
and the activator is suseful for disrupting learning and memory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a method of preventing mammalian cell migration, comprising inducing a functional Ena(enabled)/vasodilator-stimulated phosphoprotein (YASP) or promoting cell migration comprising depleting functional Ena/WASP protein in the mammalian cell. The method is useful for preventing or promoting mammalian cell migration, preferably tumour cell migration in vitro or in vivo and to prevent tumour cell metastasis in a subject. An Ena/WASP activator or inhibitor is useful for promoting wound healing, preferably fibroblasts or nerve cells of a tissue type with the inhibitor to promote actin polymerisation and tissue formation on a scaffold. The inhibitor is also useful for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           protein-FE65 interaction. Inducing the activity of Ena/VASP protein in immune or haematopoietic cells reduces the ability of the cells to migrate and this is useful for treating and preventing inflammatory disorders such as arthritis, allergy, gout, organ transplant, ulcerative colitis and ischaemic diseases and also for treating cancer metastasis. The present sequence represents the amino acid sequence of Ena/VASP homology (EVH) proline-rich motif #3
                                                                                                                                                                                                                                                                                                                                                                                                 regeneration, treating, neurodegenerative disease and metastasis, by inducing or depleting a functional enabled/vasodilator-stimulated
                                                                                                                                                                                                                                                                                                                                                                         Regulating cell motility for promoting wound healing and tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 9;

The inventional fetactes to a metunou or provention ammuniantain verta minyatation. Comprising inducting a functional Bna(enabled)/vasodilator-stimulated phosphoprotein (VASP) or promoting cell migration comprising depleting functional Bna/WASP protein in the mammalian cell. The method is useful for preventing or promoting mammalian cell migration, preferably tumour cell migration in vitro or in vivo and to prevent tumour cell metastasis in a subject. An Ena/WASP activator or inhibitor is useful for promoting wound healing, preferably fibroblasts or nerve cells of a tissue type with the inhibitor to promote activation or scaffold. The inhibitor is also useful for preventing on a scaffold. The inhibitor is also useful for preventing neurodegeneration such as in Alzheimer's disease, Dwn Syndrome, parkinson's disease, amyotrophic lateral sclerosis (ALS), stroke, direct trauma, Huntington's disease, epilepsy, progressive bulbar palsy, complexesive supramuclear palsy, progressive bulbar palsy, spinomuscular atrophy, cerebral analyoidosis, pick's atrophy, Retts cerebellar degeneration, Tourettes syndrome, hypoglycaemia, hypoxia, creabellar degeneration, for each of the company o The invention relates to a method of preventing mammalian cell migration The inhibitor dementia, Korsakow's disorder and age-related memory loss. The inhibit is administered in an amount for inhibiting the activity of Mena in a inhibitor is further useful for enhancing learning and memory in a subject having or at risk of developing a learning disorder such as Alzheimer's disease, Creutzfeldt-Jakob disease, brain damage, senile

ingoing for the EVH1 domains of Enalembled/vasodilator-stimulated phosphoprotein (VASP) proteins. The specification describes a method for modulating cytoskeletal rearrangement in a cell, or T cell response to T cell response to T cell response to T cell response to T cell with a Fyb/SLAP complex modulator sufficient to modulate the call with a Fyb/SLAP complex modulator sufficient to modulate the command a complex of a many/ASP protein and a Fyb/SLAP protein.

The method is useful for modulating cytoskeletal rearrangement in a cell such as a lymphocyte, preferably a T cell, a macrophage or a cell sugment such as a platelet and for modulating T cell response to a contain or a trisk of developing infectious disease or cancer and T cell response is inhibited in a subject having or is at risk of developing infectious disease or a condition characterized by inflammation. A composition comprising a Fyb/SLAP complex inhibitor is useful for increasing platelet aggregation for promoting wound healing or clotting. The present sequence represents a peptide derived from clotting. The present sequence represents a peptide derived from

polyclonal antibodies raised against this peptide were used to screen mouse embryo expression library to isolate Fyb/SLAP clones. Fyb/SLAP proteins are liganas for the EVH1 domains of froctiens are liganas for the EVH1 domains of the specification describes a method for modulating cytoskeletal rearrangement in a cell, or T cell response to T cell receptor stimulation. The method comprises contacting the cell or T cell with a Fyb/SLAP complex modulator sufficient to modulate the formation of a complex of an Ena/VASP protein and a Fyb/SLAP protein. The method is useful for modulating cytoskeletal rearrangement in a cell such as a lamphocyte, preferably a T cell response to a T cell response to a cell receptor stimulation. T cell response is increased in a subject having or at risk of developing infectious disease or cancer and T cell response is inhibited in a subject having or is a utolimmune disease or a condition characterized by inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Modulating cytoskeletal rearrangement to regulate T cell and macrophage activation for treating cancer, autoimmune disease, and infectious disease, comprises contacting with a Fyb/SLAP complex modulator

The peptides have immune response modulatory activity, and are capable of inducing cytokines. Colostrinin and its derived peptides are useful for inducing cytokine production, for modulating an immunological response and for inducing blood cell proliferation. The peptides are useful in the treatment of disorders of the central nervous system, neurological disorders, mental disorders, demental, neurodegenerative diseases, Alzhelmer's disease, motor neuron disease, psychosis, neurosis, chronic disorders of the immune system, bacterial and viral infections and acquired immunological deficiencies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAB72246 - AAB72275 represent peptides derived from clostrinin,
